

MUSAC ENROL Configuration

1. Firstly, your local machine needs to have the latest wrapper installed. As of 9/2/2012, wrapper is v2. If you don't have v2 installed, you will not be able to connect. You will get a WSS Wrapper 500 error. The wrapper can be downloaded from <http://www.musac.co.nz>.
2. Check your schools server details which you will need when configuring ENROL. Login to the Smart-Net Intranet, click on Server Information on the left hand side panel. Under WWW, you will need to note down the Proxy Server and Proxy Port. Your school details will not be the same as below.

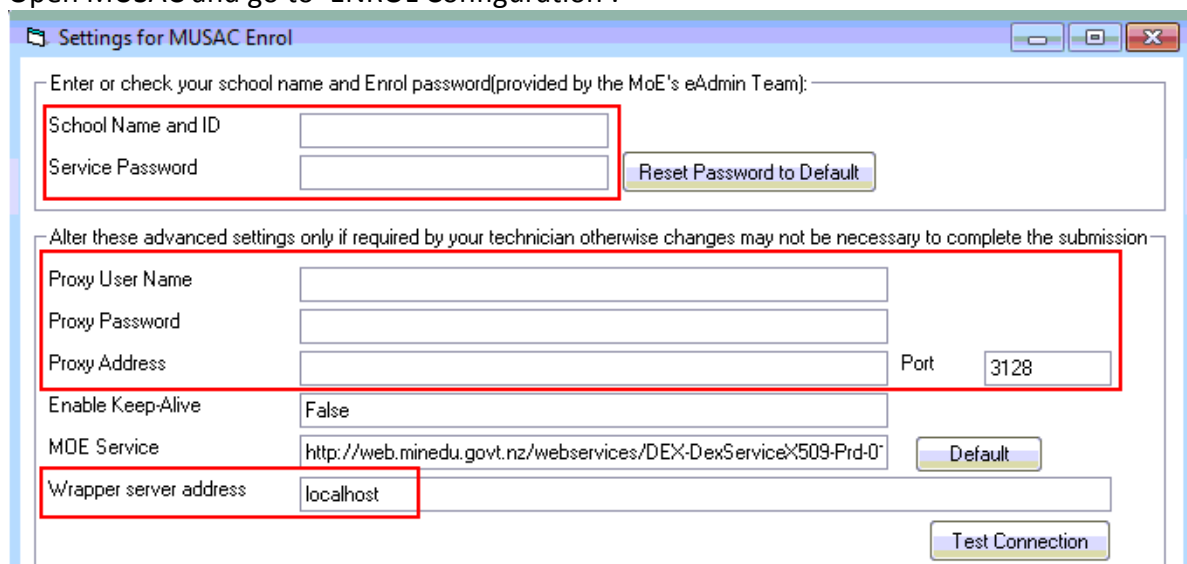

WWW:

Intranet Address: <http://intranet.smartcom.co.nz>

Proxy Server: 192.168.1.1

Proxy Port: 3128

3. Open MUSAC and go to 'ENROL Configuration'.

- a. Your 'School Name and ID' and 'Service Password' will have already been given to you by the Ministry Help Desk.
- b. Your 'Proxy Username' and 'Proxy Password' will be your Smart Login username and password or if you are on Schoolzone, your SINA username and password.
- c. The 'Proxy address' and 'Port' are those from step 3.
- d. The 'Wrapper server address' defaults to your local machines name and will need to be changed to **localhost**.

If you need any further assistance, please call the MUSAC helpdesk on 0800 600 159
